A rear safety anchor can secure the bag to your dash, etc. for additional stability.

MT-7 Floor/Seat Bolt Mount – Easy to install, without drilling. Simply loosen a passenger-side seat track bolt and slide the mounting bracket under it. It has a gooseneck swivel mounting pedestal that allows positioning for optimal viewing. Comes with a 6-hole AMPS plate that lines up with some YAESU and ALINCO remote head brackets. ICOM or KENWOOD brackets require drilling additional holes. The plastic tubing can hide the wires.

MT-8 Suction Cup Window with Express Mount
The Express Mount is attached to an integrated swivel and can be rotated 360 degrees. Mount any electronic device using a button, leather case or OEM clip. Turning the mount upside down reveals a slot for a belt clip. Use the MT-13 adhesive disc to mount on any flat surface like the dash.

QSK-5 Electronic PIN diode T/R Switch – Gives you lightning fast QSK operation from nearly any HF linear amplifier. Silently switches six times faster than a typical mechanical vacuum relay. Perfect for high power QSK CW, Packet, AMTOR and any mode requiring extremely fast T/R switching. Simple installation by plugging in a few cables. Handles 2500W PEP and 2000W CW in normal amateur service when SWR is below 1.5:1. Handles 750W on continuous carrier modes such as RTTY, SSTV and FM. An optional CF-5 cooling fan allows sustained operation at 1500W in any mode. Dim: 9.75" w x 3.75" h x 6.5" d.

CF-5 Cooling Fan for 1500W

QSK-5PC – The PCB board version of the QSK-5 which installs inside of an Ameritron amplifier. Fast, silent T/R switching with an added "AmpSaver" feature that completely cuts off the power amplifier plate current between dots, dashes and words for cooler and more efficient operation. C/O

ATP-102 ATP-100

ATP-100 Tuning Pulser – Pulses your transceiver allowing safe tuning of your linear amplifier for full power output and best linearity. Less heating, tube damage and power supply stress. Internal trim pots set Duty Cycle and Pulse Rate. Plugs into transceiver CW keying jack. Uses 9V battery.

ATP-102 Deluxe Tuning Pulser – Has front panel Duty Cycle and Pulse Rate controls.

ARB-704 Interface Buffer – A must have for Icom radios and a good idea for all others. Prevents burning and sticking of the radio's internal T/R relay contacts due to switching excessive current required to key some RF power amplifiers. Compatible with transceivers that provide a ground on transmit. If your transceiver does not have ALC and TX Ground RCA jacks, then select the right cable for your radio below.

Cables for ARB-704:

PNP-13D – For IC-706, 718 & IC-7000.

PNP-35 – For FT-100 series.

PNP-5M – For FT-847.

HM-12 GENESIS Full Range Microphone – A low cost, great sounding microphone that works with all current radios with the proper Heil CC-1 adapter cable. The single, dynamic element produces a wide 80 Hz to 14 kHz response with a +4 dB peak centered at 2 kHz for excellent voice articulation balanced with a clean, clear low-end. A great match for fine tuning your sound using the DSP EQ available in most new radios. Internal windscreen, also includes an external foam windscreen and 5/8" x 27 microphone clip. Dim: 8" long x 2" diameter, 8.8 oz.

GM-ELITE GOLD ELITE Dual Element, Wide Response Microphone Replaces the original Heil Goldline. Two switchable dynamic elements are perfect for the new DSP transceivers. The WIDE position produces a full range broadcast response of 50 Hz to 16 kHz with the traditional Heil +4 dB peak centered at 2 kHz for excellent voice articulation along with a "big bottom" low end. The NARROW position selects the new Heil HC-5.1 dynamic element with a 200 Hz to 8 kHz response with both great voice articulation and a smooth response. With DSP EQ you can change your audio to be anything from a casual "rag chew" sound to a "pile up busting" DX and contesting advantage. Use the Heil CC-1 adapter cable for your particular radio. Includes a foam windscreen and 5/8" x 27 microphone clip for Heil booms and desk stand. Dim: 7-3/4" long x 1-3/4" dia., 14 oz.

GM-4 Goldline Dual Element Microphone – Same as the GM-Elite but instead of the HC-5.1 element it has the HC-4 "DX Dream Machine" element.

PR-781 Proline Dynamic Microphone – Features full-bodied tone quality, with crisp high-frequency articulation. Originally designed for the Icom IC-7800 but it is also outstanding on other high-end rigs. When using it with Yaesu's FT-950/2000 and FTDX-5000/9000, use the Heil CC-1 XLR-BAL balanced mic. cable. Not recommended with the Yaesu FT-817ND, FT-857/97, etc., as its huge bass response tends to overwhelm the microphone inputs. Dim: 5.5" long x 2" dia., 14 oz.

ICM High Performance Desk Microphone – Designed with higher output for earlier (pre-PRO) Icom transceivers that had a lower gain microphone amplifier stage. But also works well with IC-718/735/745/746/751/756/761/765/775, and also the newest models: IC-7600, 7700, 7800 and 9100. The ICM is fitted with a 8-foot length of Heil Wire cable terminated in an 8-pin Foster connector wired for the Icom mic connector. A "light touch" PTT switch is conveniently mounted on the platinum finish body. Also a 1/4" in-line phone jack accepts PTT control from a footswitch such as the Heil FS-2 or FS-3, or HS-2 hand switch. For use with the IC-7000, IC-706 and IC-703 you will need a HSTA-iM adapter cable.

PR-20UT Proline Broadcast Microphone – Dynamic cardioid, the answer for a wide range of professional applications providing superbly natural voice articulation. Features a wide 40 Hz to 18 kHz frequency range, the ability to handle +140 dB SPL and -35 dB of rear rejection. Output Level: 52.9 dB. Comes with a stainless mesh grill, a foam windscreen, and a mic clip in a vinyl zipper bag. Matte Black lacquer finish. Impedance: 600 ohms balanced. Designed for studio and broadcast use but it may also be used for amateur radio applications using the appropriate CC-1 XLR adapter cable. Dim: 7.2" long x 1.65" diameter; weighs 9 oz.

PR-40 Wide Range/Large Diameter Studio Microphone – Designed for a wide range of professional applications; recording, live sound, and commercial broadcast. The dynamic element provides a response down to 28 Hz and is flat up thru 18 kHz with a beautiful midrange rise for nice vocal articulation. Endfire, Cardioid pattern rejects unwanted off-axis rear sounds. Large low mass diaphragm and the strongest magnet structure available. Two different diameter mesh screens and an internal breath blast filter allow close talking without pops or excessive hiss. Includes: Padded leatherette bag with molded insert and adjustable cast metal mic holder. Imp: 600 ohms, use a CC-1XLR adapter cable. Dim: 6.25" long x 2.10" dia.; 13.5 oz.

MICROPHONE PREAMPLIFIER WITH USB

USBQ Microphone Preamplifier – Ideal for recording, podcasting and broadcasting using your favorite microphone connected to your computer via USB connection. Not just an adapter, but a true single channel mic preamp complete with balanced XLR input mic level, switchable +48V phantom power, bass and treble controls and adjustable headphone output level. Low noise with 16 bit up to 48 kHz sample rates, 20 Hz to 20 kHz frequency response and variable EQ (+/-12dB @ 80 Hz and 10 kHz). Adjustable mic input gain, 600Ω input. Anodized aluminum case. Dim: 5" long x 1" dia. USB cable included.

HANDI-MICS

Only 4 in. tall, and the required CH-1 series shielded cables are 4 ft. long (2 ft. coiled, 2 ft. straight). Includes a dash mt holder, boom clip and windscreen.

HM-IC with Electret element and PTT button, for most ICOM rigs.

HM-PRO with wide range Broadcast element and PTT button.

HM's include: Dash Mount Holder, Boom Clip & Windscreen

HM-PRO / HM-IC

PROSET ELITE

PROSET

PROSET ELITE The ultimate boomset that will be Heil's *flagship* headset for years to come. Uses the new Heil HC-6 **Wide Response** microphone element designed for full range bright, articulate audio to cut through noise while retaining an impressive full bodied sound. Versatile, usable for full range commercial broadcasting to serious contest and DXing. The "iC" model uses an electret element that works well with ICOM radios. The Dual Side phones use highly efficient speakers mounted in acoustically tuned chambers that provide incredible clear wide-range sound with high outside noise rejection. The exclusive Heil Phase Reversal switch allows the user to acoustically change from a "centered-in-the-head" sound to "spatially wide" field that aids in hearing signals inside pileups and reduces listening fatigue during prolonged use. The headphone's speakers fold up for easy transportation and storage. The field-replaceable cushioned ear pads also come with removable cotton covers that can be easily removed for washing. A 6 ft. coiled cable terminates in a 1/8 in. mono plug for the microphone, and there's a stereo 1/8 in. plug for the headphone speaker connection. A 1/8 in. to 1/4 in. adapter is also supplied. The ELITE works with all available Heil AD-1 adapter cables, which mate with just about every type of amateur radio transceiver.

PSE-6 – with HC-6 "Full Range" Element (requires AD-1 adapter cable).

PSE-iC – with 'iC' Element for non-PRO Icom (Icom AD-1-iC adapter cable included).

PROSET Boom Microphone/Headset – A long time choice of *Contest and DX'ers*. Adjustable headband and full-sized earpieces with heavily-stuffed cushions provide ultimate operator comfort while sealing out noise. A phase reversal switch changes the sound from being "centered" in your head, to a spatial widening effect that can significantly improve copy under various conditions. The two versions offer a choice of Heil's HC-6 full-range element, or "iC" condenser element for Icoms.

PRO-SET-6 – with HC-6 "Full Range" element (Requires AD-1 adapter cable).

PRO-SET-iC – with 'iC' Element for non-PRO Icom (Icom AD-1-iC adapter cable included).

West Mountain Radio

RIGblasters & CW/switch

The easiest way to connect a radio to a PC to operate old or new analog and digital modes. Over 100 ham radio programs transmit and receive over 20 different modes. Your radio, a RIGblaster, a PC, and appropriate software take the place of old expensive adapters, TNCs, digital voice keyers, microphone equalizers, rig control interfaces, DSP receive filters, internet linking interfaces, automatic beacon clocks and more. Use the processing power built in to your PC instead of an old fashioned outboard box that only does a few things. All RIGblasters are fully ground isolated, come with an up-to-date CD collection of ham radio operating software, all the cables and power supply – all you need to get on the air. Six models to choose from for your operating needs. Use with any USB or RS-232 computer and over 2000 different radios.

RB/PR/CUSB RIGblaster Pro USB – The only complete computer interface! Allows you to use all sound card software, computer control a radio, equalize and record a microphone, operate keyboard FSK, CW and more. Built in rig control interface for most radios. Single serial port rig control and sound card operation. Separate CW and FSK keying outputs. Transmit audio muting. Two mic. switchover. For the ham that wishes to do everything that can be done with a computer and a radio. For 8-pin and RJ-45 radios as supplied.

RB/NO/CUSB RIGblaster Nomic USB – Small and inexpensive. Perfect for portable or temporary setups. No power supply needed. Perfect for an Internet remote link. Unplug your microphone whenever you wish to use sound card software. For 8-pin and RJ-45 radios as supplied.

RB/PP RIGblaster Plug & Play – Compatible with over 25 modes and all ham radio sound card programs. Connects through radio's DATA jack and computer's USB port and sound input. A built-in USB to serial converter provides T/R switching, CW keying and CAT/CI-V rig control. Complete with USB cable, computer audio cable & a CD-ROM. The plug & play has fully isolated audio and keying, runs from USB power. A special feature for Echolink provides carrier detect on CTS, DSR and DCD. Discone Antennas

Mobile Discone Antenna

The **D220** mobile discone antenna offers outstanding broadband reception performance from 100 MHz to 1.6 GHz. The discone is vertically polarized and omnidirectional. The upper element is tuned for the 144, 440, 902 and 1.2 GHz ham bands and allows you to transmit at a maximum power level of 50 watts. The antenna will mount on the Diamond 400/K600 series of mounts, and will withstand wind speeds in excess of 100MPH.

Super Discone Antennas

The **D3000N**, **D130J** and **D130NJ** Super Discone Antennas are ultra-wideband, covering amateur radio, commercial 2-way, cellular, air traffic control and various utility frequency bands. Rust-free stainless steel is employed in major component parts making the antennas rust resistant and durable.

- Ideal for 2m, 1-1/4m, 70cm, 33cm and 23cm amateur commercial bands
- Excellent "shop" antenna for testing various transmitters on a single coax
- Can be made further compact and lightweight by removing the top loading coil if 25-50 MHz reception is not required

Vertical Antennas

CP6AR Multiband HF

Diamond's **CP6AR** is a multi-band trap-vertical antenna for HF bands, covering the 75*, 40*, 20, 15, 10 and 6m amateur bands. Made from heavy duty aluminum, the CP6AR assembles easily and yields excellent performance and reliability from a compact base station antenna. Its compact size allows for many mounting options. Minimum 15' diameter required for mounting radials. No additional ground radials required. Use an antenna tuner for increased bandwidth.

Industry's Best NMO Mobile Antennas

Larsen's version of the standard 3/4" Motorola TAD/TAE type mount (NMO) uses advanced design, materials and construction to provide a premium mount. For demanding outdoor applications, the chemical resistant NMO series is housed in a resin polymer plastic shell which is completely molded around the nickel plated brass whip stud to eliminate moisture damage. Our super seal gasket also greatly reduces water intrusion under the base.

Fixed Station Multi-Band HF Vertical Antennas

Our exclusive trap design offers the lowest loss possible. A special extrusion process allows us to produce trap covers to an otherwise unattainable close tolerance, assuring accurate and permanent resonance. Our highly accurate traps provide top signal reports and consistent contacts. Accurate tuning is made possible by the wide range of tuning flexibility designed into our verticals. Not only can you use the normal adjustable tubing to change resonance, but the traps themselves can be field tuned for an additional 2 MHz. shift. This flexibility will enable you to achieve a good S.W.R. even if your installation is not ideal.

- Broadbanded - low VSWR at band edges
- Power capability - full legal limit on SSB or CW
- Solid one inch fiberglass trap forms for optimum electrical and mechanical stability
- Heavy wall, high strength aluminum tubing, heavy duty aluminum mounting bracket and low loss, high strength insulators.

Effective Atmospheric Surge Voltage Protection

High voltage static charges can be induced on your feedline from local thunderstorms, high winds, rain and snow. Protect your connected equipment from serious damage by using ALPHA DELTA's Coax Switches, Surge Protectors and the DELTA-C Center Insulator which all incorporate special **Arc-Plugs®** that "bleed off" rising static electricity charges from the feed line, routing them harmlessly to ground. Effective as these devices are, it is important to use accepted station grounding techniques as outlined in the ARRL Handbook and other publications.

APARTMENT ANTENNAS WHIPS

1622 Apartment Antenna – Operate 40M thru 10M, 6M and 2M, up to 300W PEP. Tuning is accomplished by changing the tap on the highly efficient air-wound coil and adjusting the counterpoise for best SWR. Its universal mount/clamp lets you easily attach it to window frames, balconies and railings. It also works great indoors mounted to a desk, table or bookshelf. The 5.5 ft. radiator collapses to 2.5 ft. for transport or storage. Includes 50 ft. of coaxial cable, RF choke balun, 50 ft. counterpoise wire and safety rope.

1954 Telescoping Whips – 10 ft. (29 inches collapsed). Made of 1/2 in. diameter plated brass with a 3/8 x 24 threaded stud. Use as an antenna by itself for 10/12/15M or use it on top of a screwdriver or other base/mid-loaded antenna to greatly improve the efficiency. Use two whips with an MFJ 347 adapter to make a portable dipole.

347 HF Stick Mini-Dipole Mount 3/8 x 24 – Use two of the MFJ Telescoping Whips to make a compact dipole. Mounts on mast up to 1.25" OD.

ROLL-UP ANTENNAS

1730 2-Meter Pocket Roll-up Antenna – Just hang up this 1/2-wave J-antenna in the clear, and plug BNC connector into your handheld. Its omni-directional and has significant gain over a duck or 1/4 wave. Dim: 75" long.

1736 6 Meter Roll-Up J-Pole Antenna – Similar to the 1730 above. 1/2-wave long, resonant around 52.5 MHz, VSWR < 2:1. PL-259 connector.

VERTICAL ANTENNAS

1796 1/2-wave 6-Band No-radials 12 ft. tall Vertical, Covers 40, 20, 15, 10, 6 and 2M – Only 12 feet high with a tiny, 24 inch foot print. Mount it anywhere: ground level to tower top, apartments, small lots, trailers. Perfect for vacations, field day, DXpeditions and camping. Uses efficient end loading with no lossy traps. And the entire length is always radiating. Automatic bandswitching, low angle radiation, omni-directional pattern, handles 1500W PEP.

1798 10-Band No-radials 20 ft. tall Vertical, Covers 75/80, 40, 30, 20, 17, 15, 12, 10, 6 and 2M – The bigger brother of the MFJ 1796. Full size performance is achieved using separate full size radiators for 2-20M and high efficient end loading for 30, 40 and 75/80M. You don't need a ground or radials because an effective counterpoise that is 12 feet across gives you excellent ground isolation.

TUNED DIPOLES

Simple, efficient 1/2 wavelength single-band performers. The radiating section is constructed with strong #14 AWG UV-resistant insulated stranded copper wire. Includes a RadioWavz 1:1 balun which improves the pattern and reduces feedline radiation. Terminates in an SO-239 to connect any convenient length of 50Ω coaxial cable. Install as a flat-top or inverted-V. Assembled, ready to install.

DOUBLE BAZOOKA

A broadband 1/2-wavelength antenna that functions at 98% efficiency with a nominal VSWR of less than 2:1 over the entire band. The radiating section is constructed from 1/4" diameter coaxial cable that has the outer shield opened at the center to create the feed point which does not require a balun. The center conductor is not cut and does not radiate, but acts as 1/4-wave shorted stub that cancels reactance as frequency changes resulting in increased usable bandwidth. Feeds directly with 50Ω coax. The coax outer jacket is intact and sealed so there is no exposed wire. During rain or windy conditions, noisy static charges do not build up. Handles 1500W SSB & 200W CW. Install horizontally or as inverted V. Fully assembled.

ADJUSTABLE LOADING COIL

Durable coil wound around a ferrite core. Use one for mobile or base vertical or use two in a pair for a rotatable dipole.

P80 Resonates 80-12M using a 102" whip or 40-6M with a 42" whip. Dim: 9.5"l x 1.5"dia.

EFH40 40 meters, 66 ft. length.

EFH80 80 meters, 132 ft. length.

DX OFF-CENTER-FED WINDOM

A favorite of DX'ers world-wide due to its terrific multi-band performance when used with an antenna tuner. Basically a dipole fed off-center with a RadioWavz 4:1 balun positioned at an optimum off-center point to provide the best multi-band match. An SO-239 connector provides for attaching convenient length 50Ω coaxial cable. The radiation from the vertical feeder portion combines with horizontal radiation produced by the top section to form a low-angle, omni-directional pattern. The antenna should be installed as high as possible and the feedline should drop vertically from the horizontal as far as is practical. Made with durable, #14 black, UV resistant insulated stranded wire. Rated 1500W SSB/ 200W CW. Install horizontally, as a sloper, or inverted-V.

YAESU

ATAS-25 HF/6/2M/430 MHz Portable Field Antenna for the FT-100, FT-817, FT-857 & FT-897

Covers 7, 14, 21, 28, 50, 144 and 430 MHz. You switch bands by changing and adjusting the supplied elements. Handles 100W SSB/CW @ 50% duty cycle on HF/6M (50W AM/FM) and 50W all modes on 144 and 430 MHz. Mounts on a 1/4" camera tripod (not supplied). SO-239 coaxial connector. Dim: 7.2 ft. tall, 2 lbs.

ATAS-120 HF/6/2M/430 MHz Motorized Tuning Antenna

Remotely tunes for the lowest SWR using control voltages routed thru the coaxial cable from an ATAS compatible Yaesu transceiver. It is recommended to use a duplexer, otherwise the coaxial cable must be switched to the correct jack when changing between HF/6M and 2M/440 MHz. Mounts directly on a standard *Diamond* or *Comet* mobile mount. Handles 120W at less than a 2:1 VSWR. Dim: 4.59 to 5.25 ft.; 1.98 lbs.

ATBK-100 VHF/UHF Antenna Base Kit – Not required unless operating the VHF or UHF bands with the ATAS-120 off the vehicle. It restores the low-angle response for enhanced performance. Use with suggested base mount.

MFJ Manually Tuned Screwdriver Antenna

Compact and lightweight, supplied with a 4.5 ft. telescopic whip for mobile and a 10 ft. telescopic whip for stationary operation with better efficiency. Tunes quickly and easily by simply sliding the aluminum cover up or down over the loading coil. Copper-beryllium finger stock completely surrounds the coil maintaining a solid connection as tuning is accomplished. Unused turns on the coil are shorted out and completely shielded. Once tuned, a nylon tipped thumbscrew locks the cover in place. The 4.5 ft. whip collapses to 23 in., the 10 ft. whip to 19 in. Coil and whips can easily be packed into a backpack for hiking or camping. A standard 3/8" x 24 stud in the base makes it easy to attach to a number of existing mounts. Handles 200W(SSB).

1661 – 40–6M, 12 in. (1 lb).

1664 – 80–6M, 15 in. (1.25 lbs).

1624 HF Mini Bugcatcher – Operate 40 thru 6 meters simply by changing the tap on the efficient air-wound coil and adjusting the supplied counterpoise wire for best SWR. The 5.5 ft. whip collapses to 2.5 ft. for storage or avoiding a garage door. Handles up to 300W (SSB). Versatile mounting using a trunk lip, mirror, luggage or tri-mag mount (shown but not included).

192512

1925 Screwdriver Antenna Controller – Use the Yaesu ATAS screwdriver antenna with Alinco, Kenwood, Icom and other radios. Installs in-line between the antenna and rig and provides the necessary control voltage to operate the antenna.

192512 Screwdriver Antenna Controller Designed for the Icom IC-706 with a special control cable and 4-pin connector that mates with the 706 controller port. The Up/Down switch puts the 706 in low power and tunes antenna. When the lowest SWR is found, simply release the switch and you're ready to operate. Simple to install. No modification to the radio or antenna is necessary.

The Outbacker – Provides efficient, multiband mobile performance in a rugged, lightweight, single whip-only design. A sleek, low profile design without bulky traps or coils allows use with standard 3/8" x 24 bases and trunk-lip mounts.

It features a fiberglass shaft, using a pre-tuned copper helical winding with clearly marked brass band taps at points along its length. A final coating of smooth epoxy resin and polyurethane, gives the OUTbacker a toughness and durability not found in other brands, while making a really good looking mobile installation.

To change bands, simply plug into the desired band tap and resume operating without changing whips, resonators or retuning.

MA SERIES CRANK-UP TUBULAR TOWERS

The premier MA-Series towers are designed to be both safe and neighbor-friendly. The slender design gives a clean flagpole-like appearance while allowing antennas 10 sq. ft. in 50mph winds, depending on the model.

FREE STANDING "LOW-PROFILE" CRANK-UP LATTICE TOWERS

The compact TMM Series are designed to offer an alternative for clients in height restricted areas. These towers have a minimum retracted height of 11'4" to 12' (depending on rotator). Visual impact is reduced and antenna servicing is made easier. The TMM Series are lightweight, freestanding, and allow up to 18 sq. ft. of antennas in 50mph winds (433HD will handle 24 sq. ft.).

FREE STANDING CRANK-UP LATTICE TOWERS

The standard duty TX Series are as strong or stronger than most competitors' heavy-duty models. They have 21' sections with 4' overlap to provide extra height, as well as to help prevent binding in high winds. The TX Series comes complete with rotator plate and base hardware and require no guying. Will handle 18 sq. ft. of antennas in 50mph winds. All bases will accept the TRX Series raising fixtures.

FREE STANDING HEAVY-DUTY CRANK-UP LATTICE TOWERS

The HDX Series heavy-duty telescoping towers have up to 2-1/2 times more wind loading capacity than others (up to 30 sq. ft. at 50mph). This allows for large stacked arrays, while using commercial-type bases and anchor bolts. All T-bases can utilize the TRX Series raising fixtures, allowing the tower to hinge. None of the lattice style towers require guying.

Features: Wide matching range; 6-position antenna switch; New 4-core balun; Balanced line feed-thru Insulator; 1500W air-cooled Dummy load; True peak and average lighted Cross-Needle SWR/Wattmeter; 6:1 reduction drives with detailed logging scales; 3-digit turns counter; Extra large knobs and fast tune crank. Uses a roller inductor edge wound from thick .06-inch silver-plated solid copper strap with dual silver-plated compression wheels and high-current, 1000 pF and 500 pF air variable capacitors. Dim: 13.75" w x 7" h x 16" d; 15 lbs.

998 Intellituner™ – Covers 1.8 to 30 MHz, rated at 1500W SSB/CW. Ultra-fast automatic tuning matches impedance from 12 to 1600Ω using algorithms, and over 20,000 memories. Key your transmitter and *InstantRecall™* determines whether that frequency has been used before. If so, tuning is instantaneous. If not, an algorithm measures the impedance, selects the necessary components, and then fine-tunes the SWR. If the antenna impedance is outside the tuner's measurement range, *Adaptive Search™* measures the frequency and determines relevant component values for fast tuning. MFJ's *Amplifier Bypass Control™* (requires interface cable) provides safe tuning. On initiation, any in-line amplifier is bypassed. Next, a low-power CW tuning carrier from your transceiver is keyed. When tuning is complete, your transceiver reverts to its prior power and mode, and re-enables the amplifier. A Cross-Needle SWR/Wattmeter displays 300/60W or 3000/600W forward and reflected full-scale power ranges. A two-line, 16-character backlit LCD meter displays SWR, frequency, antenna selected, an auto ranging bar-graph power indication, and the final matching inductor and capacitor values. A memory system provides four antenna selections for each of the two switchable rear panel antenna connectors. A rear binding post for end-fed long wire antennas, balanced line antennas require an external 1.5kV 4:1 balun (MFJ-912). Requires 10-15V DC @ 1.3 amps. Dim: 13" w x 4" h x 15" d; 9 lbs.

The #1 Line of Autotuners!

AT-1000ProII HF/6M Automatic Tuner

The new AT-1000ProII keeps many of the same features of the previous model, but simplifies the operation. With the two position antenna switch there are 2,000 memories that store tuning parameters for near instantaneous memory recall whenever you transmit on or near a frequency you've used before. Just key and it tunes! It will operate at any power level between 5 and 1,000 watts peak RF input. Power rating on HF is 1000W SSB, 750W CW and 500W Digital. On 6M it is 250W on any mode. It has a large, easy to read bargraph with two selectable scale ranges (100 and 1,000 watts) as well as SWR meter. It will interface with many popular transceivers, enabling their TUNE button to control the AT-1000ProII's operation. Dedicated control buttons allow you to fine-tune capacitance and inductance on those rare occasions when the AT-1000ProII can't find a perfect match by itself. It will tune from 1.8 to 54.0 MHz continuously, and will match an amazing range of antennas, from Yagis and dipoles to inverted-Vs and slopers; virtually any coax-fed antenna from 6 to 1000 ohms impedance (16 – 150 ohms on 6 meters). Tuning time is usually under 10 seconds. If you're transmitting near a frequency with stored tuning parameters, it will set those parameters in under 0.2 seconds. Longwires or antennas fed with ladder line require an external balun. Dim: 10"w x 3"h x 11"d; 5 lbs.

Z-11ProII Portable Tuner

Everything needed in a small, portable, battery operated tuner. It handles 0.1 to 125 Watts (100W on 6 meters), ideal for both QRP and 100W transceivers from 160 to 6 meters. With 2,000 memories, the Z-11ProII uses LDG's state-of-the-art processor-controlled switched-L tuning network. It will match dipoles, verticals, inverted-Vs or virtually any coax-fed antenna. With an optional LDG balun, it will also match long wires or antennas fed with ladder-line. Includes DC power cable. Dim: 5.0"w x 1.5"h x 7.5"d; 16 oz.

Controls the radio's [TUNE] button function to provide a low power output for tuning, adjusting an antenna, checking SWR, etc., no matter what mode you are using. Interface cable included. No radio modification. Provides an interface between your YAESU transceiver and ICOM type accessories such as ICOM antenna tuners, tuners from other manufacturers and screwdriver antenna controllers.

7000 TUNE CONTROL

706 TUNE CONTROL

706TUNECONT Tune up Control for IC-706/718 – Plugs into the Molex connector on rear of the radio. Converts radio's TUNER/CALL button function to TUNE MODE which limits RF output to 8-10W and produces a sidetone through the speaker. When finished, it reverts back to previous mode and power. No switching to AM or RTTY or holding the PTT. Works 160–6M (no 6M with original IC-706).

7000TUNECONT Tune up Control for the IC-7000 – Activates the [TUNE/CALL] button on your IC-7000 to tune an antenna or an external tuner while displaying the SWR on the radio. Senses the voltage on a screwdriver antenna motor for automatic turn on and off of the tune mode. User selectable tune-up power can be a constant 30W or pulsed at a 50% duty cycle. The supplied cable connects to the radio's CI-V jack. It utilizes the CI-V data port and the tuner port for SWR readout, frequency and the radio's preprogrammed sequencing of the tuner port.

7000SCDRCONT Screwdriver Antenna Control for IC-7000

Integrates directly with the Icom IC-7000, the 7000TUNECONT (required, see above) and any screwdriver antenna. It automatically finds resonance with the push of the [TUNE] button on the IC-7000. Requires no connections or modification to the antenna or radio. Antenna SWR displays on the IC-7000.

Connector Protection

COAX-SEAL

UNV 104 Hand Moldable Plastic for Antenna Component Protection - The quick and effective way to seal and protect all types of coaxial connectors and antenna system components. Simply wrap it on like regular tape, then mold it to any shape. It adheres tightly to metal, vinyl and polyvinyl coax outer jackets. Stays flexible and sealed at any temperature to resist moisture penetration. Permanent flexibility makes it possible to remove and reinstall fittings, then re-seal by reforming the same material. Non-toxic and non-contaminating roll, 1/2" w x 60" l.

CoaxWrap™ Non-Adhesive Silicone Tape A super-flexible tape that does not have any glue or adhesive; it simply bonds to itself. Can insulate up to 8000 Volts, will not melt up to 500°F, and resists UV damage and weathering. Removes easily and clean without residue.

CWR CW-10B 1"x10' Black Tape Roll.
CWR CW-10R 1"x10' Red Tape Roll.

Cross Devices Water Protection

STUF Dielectric Water-proofing Filler for Coaxial Connectors - A high purity macroscopic foam that dielectrically simulates the coaxial cable core and seals out moisture. Just fill coax connectors and tighten! The filler material hydraulically channels into all voids and points of moisture entry. Non-hardening, easy to remove. No silicone or other additives to harm coax cable material ... (tube)

Corrosion Protection

PENETROX™

PENETROX A - A highly conductive grease recommended for use on all aluminum to aluminum and aluminum to copper connectors, and on bus bars. Assures a high conductivity joint by sealing out air and moisture to prevent corrosion and reformation of oxide film. During assembly simply apply liberally to mating pieces of antenna components, tubing, etc. Also acts as an anti-seizing lubricant to provide easy disassembly. (4 oz. bottle)

LOW-PASS & HIGH-PASS FILTERS

For suppressing Television Interference (TVI) from nearby HF transmitters

LOW-PASS FILTERS installs in the transmission line between the transmitter and antenna or tuner. Allows signals below the filter's cutoff frequency to pass through to the antenna and attenuates signals above the cutoff frequency.

HIGH-PASS FILTERS installs at the TV set antenna terminals. Allow signals above the filter's cut-off frequency to pass through to the TV and attenuates signals below the cutoff frequency.

YA-1 52Ω Low-Pass Filter – Frequency: 1.8 to 29.7 MHz. Power: 1500W continuous, 5000W peak. Insertion loss: <0.2 dB at 29.7 MHz. Attenuation: 80 dB @ 54 MHz. SO-239 connectors. Dim: 9.2" w x 2.5" h x 2.5" d; 2 lbs.

704 52Ω Low-Pass Filter – Frequency: 1.8-30 MHz. Power: full legal. Nine Chebyshev poles and Teflon® capacitors. Attenuates above 40 MHz. Insertion Loss: <0.5 dB. RF tight cabinet. Dim: 3" w x 3" h x 9" d.

VECTRONICS

LP-30 52Ω Low-Pass Filter – Covers 1.8-30 MHz, handles 1.5 KW. Up to -70dB harmonic attenuation.

LP-2500 – Same, but 2.5KW rating.

HPF-1 75/300Ω High-Pass Filter – Reduces signals received from transmitters operating below 30 MHz. Effective in the TV passband 52 to 550 MHz. Unique shield breaking circuit prevents antenna cable from acting like an HF antenna. Includes a 75Ω matching transformer.

HPF-2 High-Pass Filter – Same as HPF-1 but a Deluxe Version that suppresses the more severe TV interference from nearby radio transmitters such as broadcast, commercial, two-way, amateur and CB operating below 30 MHz. Additionally, uses a toroid ferrite core to reject common mode interference caused by RF current on the coax shield.

HP-75T High-Pass Filter – Stops interference to TV, FM & VCRs from amateur radio and other RF sources. For 75Ω coaxial cable systems Provides 70 dB attenuation below 50 MHz with a very sharp cut-off at 52 MHz.

Contains: 12 beads with 0.2 inch holes for small wires and cables, 4 toroid (donut shaped) cores with 1/2 inch holes, 4 with 3/4 inch holes and 4 split beads (toroids cut in half so you can put them over cables without removing the connectors). Two fit over RG-58 (1/4 in. hole) and two fit over RG-8 (1/2 in. hole). Includes a RFI tip sheet explaining the use of ferrites and how to use them to keep RF out of computers, stereos, VCRs, alarm systems and telephones.

701 RFI Free Choke Kit – Cancel RFI radiation due to common-mode currents or signal/noise pick-up from external sources by winding an offending cable or wire around an RFI suppressing toroid. They're split into halves allow for easy winding on all types of cable: computer ribbon, coax, power cords, telephone lines, audio-video interconnects, etc. Particularly effective in eliminating audio from RF pickup by computers and other electronic devices. The halves mount in snap-together plastic frame and multiples can be stacked for increased attenuation. These are effective from 0.5 to 200 MHz ... (Pack of 4)

COD ORDERS

Minimum COD order is \$50.00 in merchandise and shipment via UPS Ground only (no air or parcel post). The flat-rate, plus a \$11.00 COD fee per package applies. Payment by money order or certified check only, not cash.

DAMAGED ITEMS

If you discover a damaged shipment, **THE CARRIER SHOULD BE NOTIFIED IMMEDIATELY**. The merchandise should not be returned to us until notified to do so by the carrier. All packaging materials must be retained including styrofoam peanuts, inner and outer cartons, labeling, etc. for inspection by the carrier or the claim may be denied. With shipments properly packaged (as all our shipments are), the ultimate responsibility for delivery in good condition rests with the carrier.

DEFECTIVE ITEMS

Defective items should be returned to AES or the manufacturer for warranty repair or replacement, at the manufacturer's discretion. After processing, we will return it via ground method, at our expense in the 48 contiguous states. If you receive defective equipment, call our Customer Service Department at 414-358-4087 for instructions. It is the customer's responsibility to return the defective merchandise to AES or the factory. The manufacturer's warranty does not include reimbursement for freight charges. Canadians please see "*Canadians Note:*" under TRADE-INS.

INTERNET ORDERS

You can order directly via our website - www.aesham.com. If you have any problems using our website or would like to speak to a salesperson; call any of our locations for support.

PAYMENT

Accepted forms of payment are electronic bank transfer (add \$50.00 Wire Transfer Fee), certified check, personal check, money order, credit card (VISA, MasterCard, Discover, American Express, IMPAC), or COD. The customer's choices of payment methods may depend on amount of purchase or destination of shipment.

PRICING

Due to foreign currency fluctuations, promotions, manufacturers' specials, etc. prices may vary, so be sure to confirm prices when ordering. All prices and specifications are subject to change without notice. AES is not responsible for typographical errors or omissions.

REFUNDS

Amounts under \$5.00 are not refunded unless requested in writing to the Milwaukee headquarters within 12 months.

RETURNS

In order to maintain the lowest possible prices, we do not offer a *free trial* or *evaluation period* on new equipment. If permitted, an **authorized** return of merchandise for credit (it must be like new with all original packaging) will be subject to a **Minimum 15% Restocking Fee**. The item must be returned within **10 days** after receipt, prepaid, with a copy of the purchase invoice and a letter describing the reason for the return. **We reserve the right to charge back actual outbound freight on returns from flat-rate or prepaid shipments.** No returns on antennas, towers, cable, items drop-shipped from the manufacturer, audio or video tapes, kits, books, or computer software. Canadians please see "*Canadians Note:*" under TRADE-INS.

REFUSED ORDERS

If a package is refused by the customer the actual outbound freight and actual inbound freight charges by the carrier will be deducted from the return. Packages returned by the customer unopened will only be subject to actual outbound freight. AES also reserves the right to charge a minimum 15% restocking fee to the return.

PACKING FOR SERVICE AND/OR RETURN

When returning heavy, delicate, and expensive equipment, it must be carefully packed in order to avoid damage caused by normal transportation dynamics. When contents of packages are damaged, claims will be paid only if the carton and packing meet standards set in the International Safe Transit Association Procedure 1 and 1-A. These standards simply state that cartons and packing should provide reasonable protection to their contents. Ideally, contents should be suspended in the center of the carton by the packing material, no less than three inches on all sides for heavy items. For items heavier than 20 lbs., 3 in. of foam or crumpled paper should be used instead of polystyrene edge protectors. **Send your package insured.**

When you send your well-packed parcel to AES, be sure to include a letter inside the package stating your call, name, address, e-mail address, phone and reason for return. Do not rely on information written or taped on the outside of the carton.

SHIPPING

Shipping charges, which include adequate insurance, are based on the Order Total at the time of the initial shipment (COD fees not included). The order amount on which charges are determined is pre-coupon and pre-tax (see chart

on the right for rates). Cancellations on partially shipped orders will not affect the shipping charges. All back-orders from partially shipped orders are shipped PREPAID at the expense of AES via Ground Service to the contiguous 48 states only. Shipping calculations on Ground method to the contiguous 48 states have been simplified by utilizing flat-rate categories (see chart below for rates). Other expedited methods and any USPS methods are charged at regular rates without any credit for ground rates. CODs are not accepted for these faster methods or USPS.

Shipments to APO/FPO are via Priority Mail. Orders exceeding ground method weight, size or value limits will be shipped via Truck or Air Freight collect. Shipping charges (including COD fees) are taxable in WI, OH, FL & NV.

To insure orders arrive quickly, AES stocks most items at all four locations. Occasionally, an item will be temporarily unavailable at certain branches due to various reasons. In this case, AES will ship the order from the closest location that has the needed item.

GREEN POLICY

We reuse clean and durable shipping material whenever possible. Some of these materials may contain logos and descriptions from other companies.

TRADE-INS - CALL BEFORE SENDING

Amateur Electronic Supply accepts trade-ins on new equipment purchases, the worth of which is determined by the electrical and physical condition of the item. Estimates are given assuming the trade-in is in good electrical and physical condition. If it is not, a deduction will be made.

To facilitate a trade-in, the customer can choose one of the following: (A) Purchase the new item(s), send in the trade for evaluation, and have the trade-in amount refunded or credited. (B) Send in the trade and have the order held until the trade-in amount is determined.

When shipping trade-ins for evaluation, use a sturdy carton (double boxing is recommended) and plenty of packing material. Ship PREPAID & FULLY INSURED. Do not use Bus or Parcel Post. Collect shipments are not accepted.

AES assumes no responsibility for damage in transit or for filing of damage claims. Canadians, inquire locally about taxes and/or customs charges before releasing your shipment.

Canadians Note: Returned equipment not originally manufactured in the U.S. will be subject to valuation and custom charges, plus broker's fees. Check customs before shipping anything to us, including new equipment for warranty repair. We will not accept any shipments from outside of the U.S. unless all fees are paid in advance.

BIDS & PURCHASE ORDERS

AES accepts written and signed Purchase Orders from well established United States companies, military, schools, colleges, universities and federal, state, county and city Government agencies.

We welcome the opportunity to bid on your equipment requests. We are registered with FACNET, CCR, ARC, ORCA and accept Government issued credit cards. For more information please contact any AES location.

SPECIAL ORDERS

Occasionally manufacturers offer items that AES doesn't stock. Often we can order these items for you. Please contact sales: info@aesham.com for more information on special orders. Please note that once a special order is placed it cannot be canceled or returned.

INTERNATIONAL ORDERS

AES can ship orders internationally. However our domestic policies do not apply to these orders. Payments will need to be made via **Bank Wire Transfer** or **Western Union®**. Please contact us for the information to send funds. We charge the actual freight amount, and the buyer will be responsible for all local fees and duties.
